

Question 1: Smart Voting System

```
name = input("Enter Name: ")
age = int(input("Enter Age: "))
citizen = input("Citizen (True/False): ")

if age >= 18 and citizen == "True":
    print("Eligible to Vote")
else:
    print("Not Eligible")
```

Output:

A screenshot of a terminal window with a dark background. It shows the output of the program: 'Enter Name: Sanskar', 'Enter Age: 20', 'Citizen (True/False): True', and 'Eligible to Vote'. The input text is in a light green color.

```
Enter Name: Sanskar
Enter Age: 20
Citizen (True/False): True
Eligible to Vote
```

Question 2: Student Grade Analyzer

```
name = input("Student Name: ")
python = int(input("Python Marks: "))
ai = int(input("AI Marks: "))
ml = int(input("ML Marks: "))
```

```
total = python + ai + ml
percentage = total / 3
```

```
if percentage >= 90:
    grade = "A"
elif percentage >= 75:
    grade = "B"
elif percentage >= 50:
    grade = "C"
else:
    grade = "Fail"
```

```
print("Total:", total)
print("Percentage:", percentage)
print("Grade:", grade)
```

Output:

```
Student Name: Sanskar
Python Marks: 90
AI Marks: 89
ML Marks: 86
Total: 265
Percentage: 88.33333333333333
Grade: B
```

Question 3: Employee Bonus Checker

```
name = input("Employee Name: ")
salary = float(input("Salary: "))

if salary >= 50000:
    print("High Bonus")
elif salary >= 30000:
    print("Medium Bonus")
else:
    print("No Bonus")
```

Output:

```
Employee Name: Sanskar
Salary: 90000
High Bonus
```

Question 4: ATM Withdrawal System

```
balance = float(input("Account Balance: "))
withdraw = float(input("Withdrawal Amount: "))

if withdraw <= balance:
    balance -= withdraw
    print("Transaction Successful")
else:
    print("Insufficient Balance")

print("Remaining Balance:", balance)
```

Output:

```
Account Balance: 21000
Withdrawal Amount: 10000
Transaction Successful
Remaining Balance: 11000.0
```

Question 5: Number Analyzer

```
num = int(input("Enter Number: "))

if num >= 0:
    print("Positive")
else:
    print("Negative")

if num % 2 == 0:
    print("Even")
else:
    print("Odd")
```

Output:

```
Enter Number: 24
Positive
Even
```

Question 6: Login Verification System

```
username = input("Username: ")
password = input("Password: ")

if username == "Sanskar" and password == "2408":
    print("Login Successful")
else:
    print("Invalid Credentials")
```

Output:

```
Username: Sanskar  
Password: 2408  
Login Successful
```

Question 7: Multiplication Table Generator

```
num = int(input("Enter Number: "))
```

```
for i in range(1, 11):  
    print(num, "x", i, "=", num * i)
```

Output:

```
Enter Number: 8  
8 x 1 = 8  
8 x 2 = 16  
8 x 3 = 24  
8 x 4 = 32  
8 x 5 = 40  
8 x 6 = 48  
8 x 7 = 56  
8 x 8 = 64  
8 x 9 = 72  
8 x 10 = 80
```

Question 8: Sum of First N Numbers

```
n = int(input("Enter N: "))  
total = 0
```

```
for i in range(1, n + 1):  
    total += i
```

```
print("Sum =", total)
```

Output:

```
Enter N: 24  
Sum = 300
```

Question 9: Factorial Calculator

```
num = int(input("Enter Number: "))
fact = 1

for i in range(1, num + 1):
    fact *= i

print("Factorial =", fact)
```

Output:

```
Enter Number: 8
Factorial = 40320
```

Question 10: Attendance Checker

```
total = int(input("Total Classes: "))
attended = int(input("Attended Classes: "))

attendance = (attended / total) * 100

print("Attendance % =", attendance)

if attendance >= 75:
    print("Eligible")
else:
    print("Not Eligible")
```

Output:

```
Total Classes: 322
Attended Classes: 312
Attendance % = 96.8944099378882
Eligible
```

Question 11: Number Pattern Generator

```
for i in range(1, 6):
    for j in range(1, i + 1):
        print(j, end="")
    print()
```

Output:

```
1
1 2
1 2 3
1 2 3 4
1 2 3 4 5
```

Question 12: Smart Salary Dashboard

```
name = input("Employee Name: ")
basic = float(input("Basic Salary: "))
bonus = float(input("Bonus: "))
deduction = float(input("Deduction: "))
```

```
gross = basic + bonus
net = gross - deduction
```

```
print("Gross Salary:", gross)
print("Net Salary:", net)
```

```
if net > 50000:
    print("High Income")
elif net > 30000:
    print("Medium Income")
else:
    print("Low Income")
```

Output:

```
Employee Name: Sanskar
Basic Salary: 85000
Bonus: 25000
Deduction: 2000
Gross Salary: 110000.0
Net Salary: 108000.0
High Income
```

Question 13: Student Result Dashboard

```
name = input("Name: ")
total = 0
for i in range(1, 6):
    marks = int(input(f"Subject {i} Marks: "))
    total += marks

average = total / 5
percentage = average

if percentage >= 90:
    grade = "A"
elif percentage >= 75:
    grade = "B"
elif percentage >= 40:
    grade = "C"
else:
    grade = "Fail"

print("Total:", total)
print("Average:", average)
print("Percentage:", percentage)

if percentage >= 40:
    print("Pass")
else:
    print("Fail")

print("Grade:", grade)
```

Output:

```
Name: Sanskar
Subject 1 Marks: 89
Subject 2 Marks: 78
Subject 3 Marks: 86
Subject 4 Marks: 88
Subject 5 Marks: 78
Total: 419
Average: 83.8
Percentage: 83.8
Pass
Grade: B
```

Question 14: Bank Account Dashboard

```
name = input("Account Holder Name: ")
balance = float(input("Balance: "))
deposit = float(input("Deposit Amount: "))
withdraw = float(input("Withdrawal Amount: "))

new_balance = balance + deposit - withdraw

print("New Balance:", new_balance)

if new_balance > 10000:
    print("Balance Above 10000")

if new_balance < 0:
    print("Negative Balance")
```

Output:

```
Account Holder Name: Sanskar
Balance: 21650
Deposit Amount: 15000
Withdrawal Amount: 12000
New Balance: 24650.0
Balance Above 10000
```

Question 15: AI & ML Student Dashboard

```
name = input("Student Name: ")

python_marks = int(input("Python Marks: "))
ai_marks = int(input("AI Marks: "))
ml_marks = int(input("ML Marks: "))

total_classes = int(input("Total Classes: "))
attended = int(input("Attended Classes: "))

total = python_marks + ai_marks + ml_marks
average = total / 3
percentage = average

attendance = (attended / total_classes) * 100

if percentage >= 90:
    grade = "A"
elif percentage >= 75:
    grade = "B"
elif percentage >= 60:
    grade = "C"
else:
    grade = "Fail"

print("\n----- STUDENT DASHBOARD -----")
print("Name:", name)

print("\nAcademic")
print("Total:", total)
print("Average:", average)
print("Percentage:", percentage)
print("Grade:", grade)

print("\nAttendance")
print("Attendance %:", attendance)

print("\nChecks")
print("Percentage >= 60:", percentage >= 60)
print("Attendance >= 75:", attendance >= 75)
```

```
if percentage >= 60 and attendance >= 75:  
    print("Eligible for Internship")  
else:  
    print("Not Eligible for Internship")"
```

Output:

```
Student Name: Sanskar  
Python Marks: 90  
AI Marks: 89  
ML Marks: 86  
Total Classes: 256  
Attended Classes: 235  
  
----- STUDENT DASHBOARD -----
